

Project number: PZ-2020042022

Project name: "Creation of a linguodidactical electronic platform of Turkic languages"

The purpose of the project is:

- 1) to create a holistic (comparative) grammar of the grammar of Uzbek, Turkish, Azerbaijani, Kazakh, Kyrgyz, Tatar languages;
- 2) development of domestic and foreign tourism in the country through an electronic platform dedicated to the promotion of the languages of the fraternal Turkic peoples in our country;
- 3) creation of multimedia software products of comparative grammar of Turkic-speaking peoples;
- 4) to promote the languages of the Turkic language family and the rich national and spiritual heritage of the Turkic world through a platform dedicated to the promotion of the comparative grammar of the Turkic-speaking peoples;
- 5) to enjoy the invaluable works created in the Turkic languages as a whole, to pass on the riches of our native language to future generations and to place our language in the global network;
- 6) very easy to find, use and spell words, phrases and combinations that are rarely used;
- 7) Education in Uzbekistan is conducted in 7 languages. Increasing opportunities for multilingual education;
- 8) To widely cover and promote the role of the state language, ie Uzbek, in the strengthening of interethnic harmony in Uzbekistan and the development of friendly relations with foreign countries, the purity, beauty and richness of meaning of our native language.

The project is an important source of information for the national corpus of the Uzbek language and computer linguistics, as well as a linguodidactical (for language teaching) platform for the teaching of Uzbek and sister Turkic languages in Uzbekistan. Intensification of scientific and technical relations between Uzbek scientists and leading scientists of the developed countries, the establishment of joint research on topical scientific issues, the study or training of young talents in prestigious foreign universities and institutes. to create. Creation of an electronic database, processing of the Uzbek language on the basis of artificial intelligence: creation of spelling-editing, automatic processing and translation programs, search on the basis of various symbols, as well as increasing the specificity, lexical and educational significance of Turkic languages; Oral and written monuments in Uzbek, Turkish, Azerbaijani, Kazakh, Kyrgyz and Tatar languages, samples of national and cultural heritage in electronic form, the history of our country, the life and work of world-famous Turkic scholars, the virtues, national values, rich spirituality of fraternal nations. The need for teaching texts highlights the urgency of creating a linguodidactic electronic platform for Turkic languages.

The Linguodidactic Electronic Platform of Turkic Languages, in cooperation with the Committee on International Relations and Friendship with Foreign Countries under the Cabinet of Ministers of the Republic of Uzbekistan, will be a necessary resource for national cultural centers and public organizations of compatriots abroad.
