Project purpose: Development of criteria for student spirituality, improvement of diagnostic mechanisms, development of diagnostic criteria for spirituality, identification of diagnostic criteria and indicators of the development of student spirituality;

Main objective: systematization of methods for diagnosing the development of students' spirituality; neurolinguistic programming in the diagnosis of students' spiritual development, to display how to use technology.

Expected results: The analysis of scientific research on the formation of perceptions of moral behavior, which is the main criterion of a person's spirituality, reveals the scientific and theoretical views of both foreign and Uzbek psychologists who study ethical perceptions as a subject of research. During the implementation of the project "Improving the mechanisms of diagnostics of student spirituality", theoretical, practical, applied information collected on the basis of the tasks will be collected and published in the form of a monograph.

Scope: substantiation of socio-pedagogical conditions and acmeological aspects of the development of spiritual culture in students of pedagogical higher educational institutions; enhancing the mechanisms for diagnosing and monitoring the level of development of students' spiritual culture.

Project implementation: In the framework of the fundamental project OT-F1-036 - "Improvement of diagnostic mechanisms of student spirituality" for 2017-2020.
